

Claims

1. A two-part wobbler equipped with a wobbling plate (1) and having in its front part (2) a fixing loop (3) for attachment of the line and a hook (5) fixed to its rear part (4), and the front and the rear part joined by a joint (6), which allows relative
5 movement of these parts so as to give the wobbler movements resembling the swimming movements of small fish, **characterised** in that the fixing loop (3) is connected to a rapid fixing hook (7), to which a flap (12) resembling a fish, a spinner, a butterfly or any similar additional lure can be fixed.
2. A wobbler as defined in claim 1, **characterised** in that the loop (8) of the
10 joint (6) in the front part (2) is hook-like and during the assembly of the wobbler, it can be retracted (9) into the front part so as to close the loop, and subsequently the arm portion (10) of the fixing loop (3) can be bent (11) upwardly, thus locking the loop (8).
3. A claim as defined in claim 1 or 2, **characterised** in that the rapid fixing hook
15 (7) consists of a thread of the fixing loop (3), which is wound around the arm portion (10) so as to form a flexible loop, which locks the flap (12), the spinner or the butterfly in position.
